## CAREER OBJECTIVE

Computer Science and Engineering student at AIUB who builds full-stack web applications and AI-powered systems, with hands-on experience in ASP.NET Core, FastAPI, Next.js and LangGraph. Seeking an opportunity to apply strong skills in software development, testing and data analysis while delivering reliable, well-tested and impactful results.

## TECHNICAL SKILLS

| | |
|---|---|
| **Languages:** | C#, C++, Java, Python, JavaScript, TypeScript, PHP, Dart, SQL, HTML, CSS |
| **Backend:** | ASP.NET Core (MVC, Web API), EF Core, .NET Framework, Node.js, NestJS, REST APIs, WebSockets |
| **Frontend:** | React.js, Next.js, Tailwind CSS, Bootstrap 5 |
| **Mobile & CMS:** | Flutter, WordPress |
| **Databases:** | SQL Server (SSMS), MySQL, PostgreSQL, SQLite |
| **Testing & QA:** | Unit & Integration Testing, Playwright (E2E), pytest, Vitest |
| **Version Control & CI:** | Git, GitHub, GitHub Actions |

## PROJECTS

**StockPilot** (C#, ASP.NET Core, EF Core, SQL Server, Bootstrap) [GitHub]

- Built an inventory and sales system with POS cart, invoices, payments, returns and reports.
- Designed a layered architecture where MVC pages and the REST API share services.
- Implemented role-based access for 4 user roles using ASP.NET Core Identity with account lockout.
- Prevented overselling using SQL Server app locks, row versioning and idempotency keys.
- Automated unit, integration and browser tests in GitHub Actions against a SQL Server container.

**IncidentLens** (Python, FastAPI, LangGraph, LangChain, Next.js) [GitHub]

- Built an AI system that analyzes logs, commits and deploys to find the root cause of failures.
- Built a LangGraph pipeline with hybrid vector + BM25 search; Recall@5 rose from 0.68 to 0.84.
- Integrated OpenAI and Gemini behind one interface; citation checks reject unsupported claims.
- Deployed the Next.js frontend and FastAPI backend on Vercel with CI through GitHub Actions.

**Hospital Appointment System** (PHP, MySQL, HTML, CSS, JavaScript) [GitHub]

- Developed patient sign-up, appointment booking by doctor and specialization, and dashboards.
- Structured the application in MVC with a service layer and environment-based configuration.
- Collaborated in a 4-member team using feature branches and pull requests.

**Solar System Simulation** (C++, OpenGL) [GitHub]

- Built an interactive 3D solar system with planetary orbits, camera controls and lighting effects.

## EDUCATION

**American International University-Bangladesh (AIUB)** Dhaka, Bangladesh
*Bachelor of Science in Computer Science & Engineering*
*Coursework:* Algorithms, Databases, OOP, Software Engineering, Computer Networks, Advanced Programming with .NET, Advanced Programming in Web Technologies, SQAT

## RESEARCH & ACTIVITIES

**Research Team Lead** [GitHub]
*Unnoticed Disclosure: Readers Do Not Register AI Source Labels on De-Influencing Content*

- Led a 4-member team running a between-subjects experiment with 183 valid participants.
- Found only 50.8% of readers noticed the AI source label, a rate no better than chance.
- Built the Python analysis (pandas, SciPy, scikit-learn); models predicted trust with cross-validated $R^2 = 0.578$ and anti-consumption behaviour with AUC 0.879.

## LEADERSHIP

- **Thesis Team Lead** – Led a 4-member team from research design through analysis and paper writing.
- **Academic Project Team Lead** – Led multiple projects in .NET Development and Web Technologies, coordinating team activities, assigning tasks and contributing to implementation and delivery.

## CERTIFICATIONS & WORKSHOPS

- **AI Engineering Bootcamp** (2025) – Ostad
- **Networking Fundamentals** – Cisco
